Date :- 10/01/2020 11:57:12

Patient ID :- 131920430

NAME :- Mr. SURESH CHAND

Ref. By Doctor:-

Sex / Age :- Male 65 Yrs

Lab/Hosp :-

Company :- QUANTICO SMO PVT LTD

Sample Type :- PLAIN/SERUM

Sample Collected Time 10/01/2020 12:02:14

Final Authentication : 10/01/2020 13:31:34

IMMUNOASSAY

Test Name	Value	Unit	Biological Ref Interval
TOTAL PSA Method:- Chemiluminescence	19.200	H ng/ml	0.000 - 4.000

InstrumentName: VITROS ECI **Interpretation :** Elevated serum PSA concentrations are found in men with prostate cancer, benign prostatic hypertrophy (BHP) or inflammatory conditions of other adjacent genitourinary tissues, but not in apparently healthy men or in men with cancers other than prostate cancer. PSA has been demonstrated to be an accurate marker for monitoring advancing clinical stage in untreated patients and for monitoring response to therapy by radical prostatectomy, radiation therapy and anti-androgen therapy. PSA is also important in determining the potential and actual effectiveness of surgery or other therapies. Progressive disease is defined by an increase of at least 25%. Sampling should be repeated within two to four weeks for additional evidence. Different assay methods cannot be used interchangeably.
